

CQI+ will help pharmacy teams enrich their safety culture through continuous quality improvement activities to enhance patient safety in their practices. Safety is not just what we do, **it's who we are.**

Take action before **February 1, 2026!**

### Person-centred

Safety culture means person-centredness in action. It gives patients a voice in raising and resolving safety concerns, and their contributions will help improve the quality of care they receive.

### Modern

Leave paper in the past. Incident management software will help your pharmacy team streamline workflow and uncover key trends to enhance patient safety.

### Learning-focused

Ask "What can we learn?" instead of "Who can we blame?" Reports shared to a national database will help pharmacy teams learn from the experiences of others.

### Proactive

Be empowered to think proactively. Self-assessments will give you the information you need to take action, before an incident can occur.

**Get ready for CQI+ today!**
